REASONS FOR ALLOWANCE

The following is an examiner's statement of reasons for allowance: applicant recites a suspension design for a railway truck. The design is comprised of a standard bolster and sideframes. The bolster fits into openings in the sideframes. A spring group is installed on the bottom surface of the bolster. The spring group is comprised of a pluralit of outer springs and a plurality of inner springs that are sized to fit inside the outer springs. There are no more than nine outer springs and no more than six inner springs. The spring group has a reserve capacity less than 1.50. The Association of American Railroads (AAR) standards limited the reserve capacity of spring groups to a minimum of 1.50. Applicants performed tests on heavily weigheted railcars and found that with the spring group of the present invention a reserve capacity of less than 1.50 stil allowed the suspension fo the car to be succesfully stable and operate within safe parameters. The specification discusses the lower reserve capacity starting at paragraph 15 of the specification to paragrpah 20.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
